

Feedback on currently tested app

1. All of the Dashboard components need to be clickable:

These take you to properly filtered tasks in “Tasks”

My Open Tasks

Overdue

Due Soon

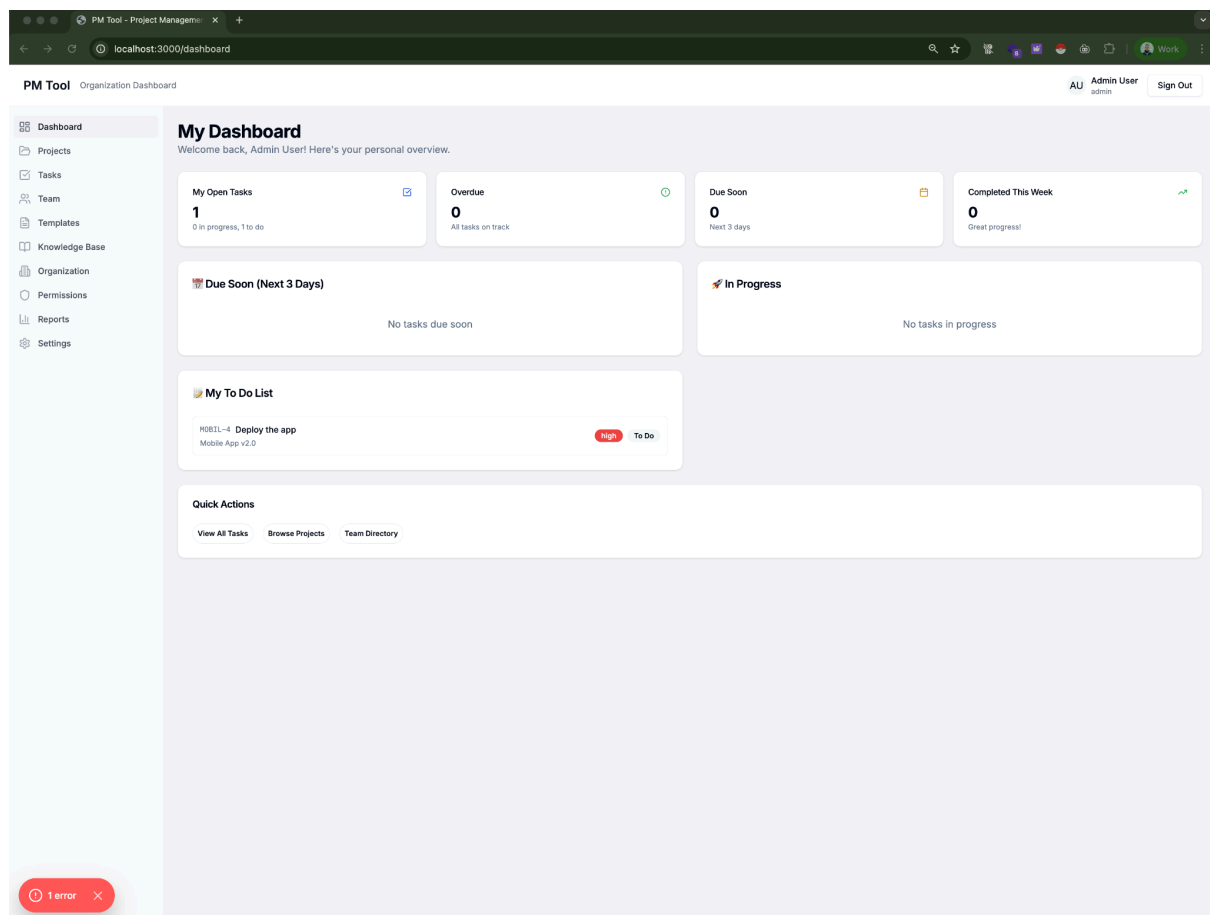

Completed this week

Due Soon

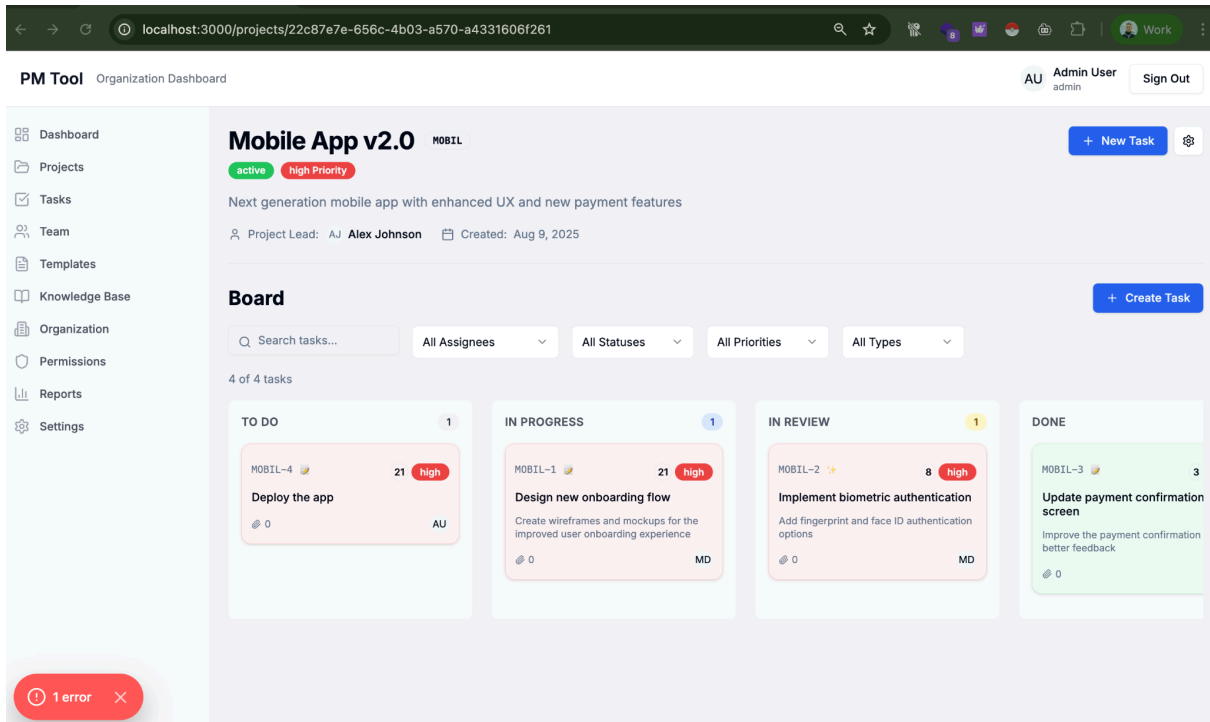

In Progress

My To Do List

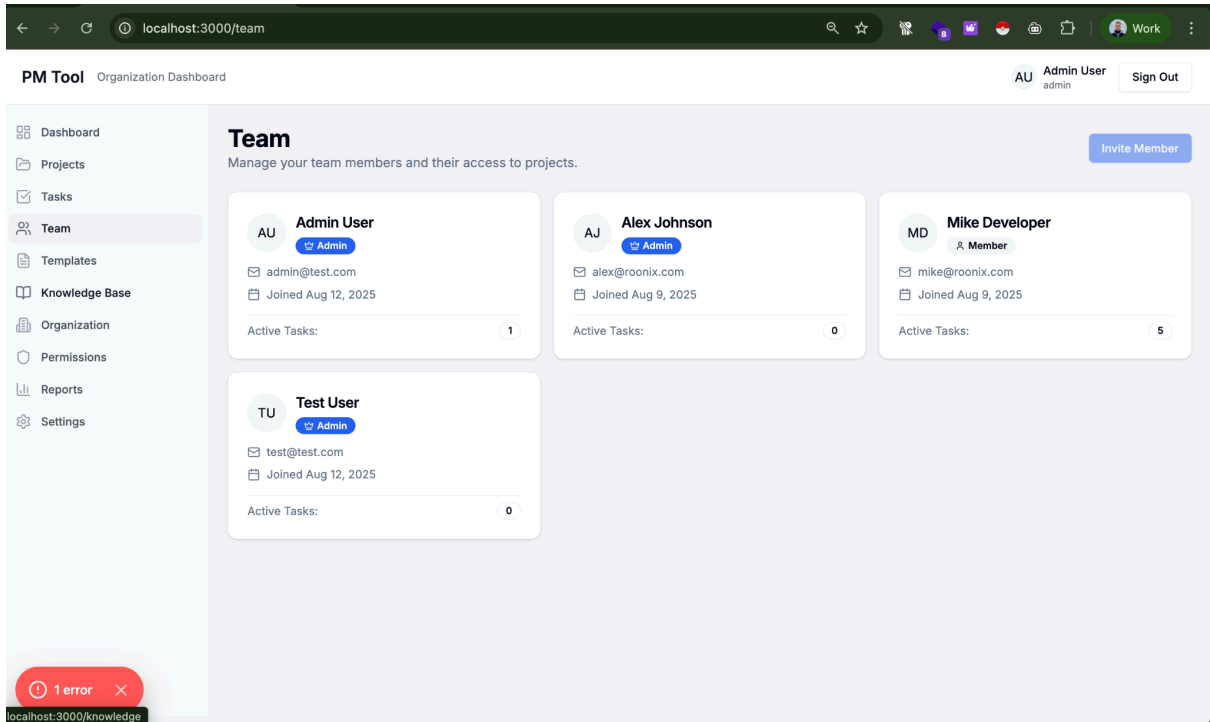

Quick Actions

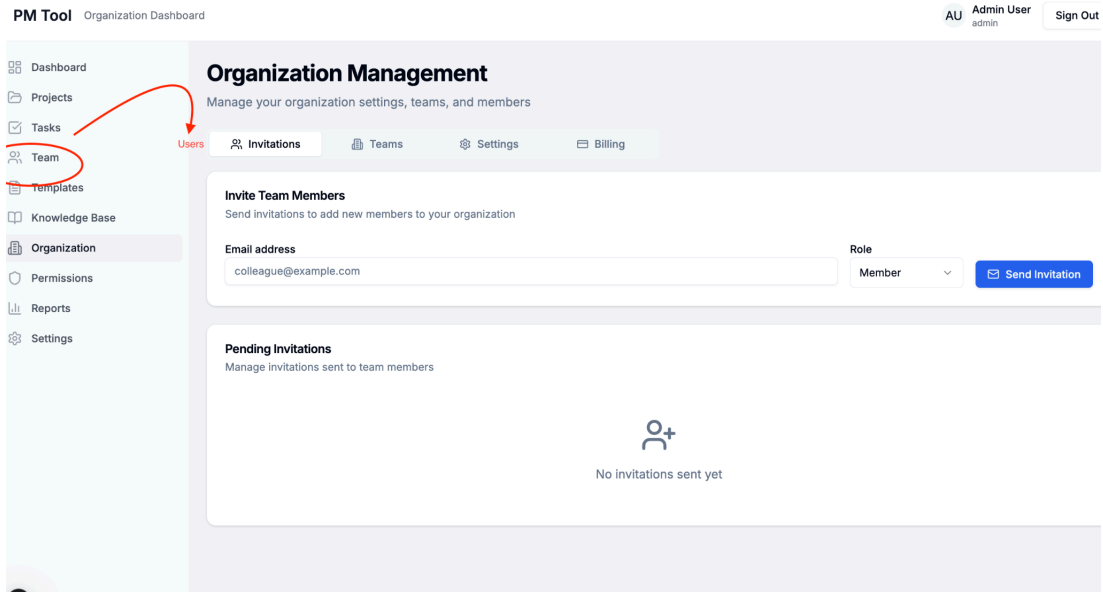

2. There is a + New Task and a + Create Task button in the Kanban Board - remove + MNew Task and only keep +Create Task

3. Merge Team and Organization >> Change “Team” to “Users”, and place before Invitations. Make Team members clickable for Admin. I can delete user or grant admin permissions. Make Active tasks Clickable for user - I want it to go to the Tasks panel with the correct filter auto set. Get rid of the “Invite Member” button on Teams Page

4. The app breaks when I try to create a Template:

Error: You provided a `value` prop to a form field without an `onChange` handler. This will render a read-only field. If the field should be mutable use `defaultValue`. Otherwise, set either `onChange` or `readOnly`.

5. Create teams is not clickable - once the pop up pops up, when I click create team, it doesn't work

6. Permissions show me access denied even though I'm under admin user

7. All reports analytics boxes should link to tasks.

8. User should be able to update settings on Settings page
